DEDICATED INTERNET

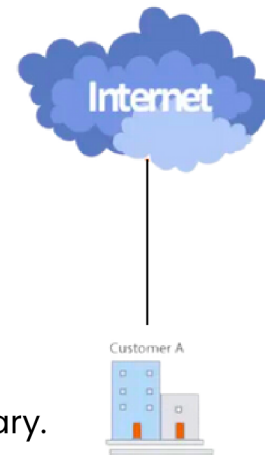

Dedicated Internet: A private connection, typically over fiber or fixed wireless. Clients receive guaranteed uptime and speeds.

SHARED INTERNET

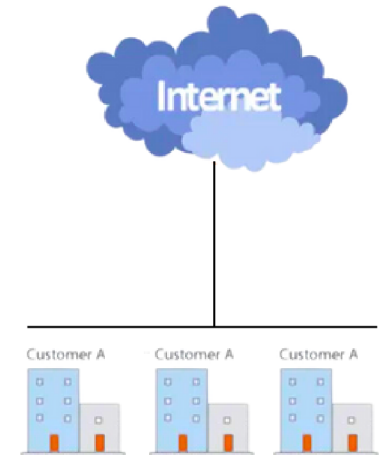

Shared Internet: Users in the same neighborhood or area share the same line.

Typically recommended as a backup or secondary circuit — not a primary.

Dedicated

Shared

SD-WAN

Software Defined Wide Area Network (SD-WAN) An automated, software-led approach to managing internet connectivity to eliminate downtime.

Software-defined Wide Area Networking (SD-WAN) monitors and allocates traffic, moving voice and data “packets” to different circuits as needed to ensure consistent quality.

SD-WAN also provides real-time failover and can host secure virtual connections (VLANs) across locations.
